

One25A Amp-pack Rack Mount

Amphion One25A is a 3-way studio monitor based on Amphion's core strengths of advanced acoustic design, signal path purity, and revealing yet pleasing tonality, enhanced with the benefits of an active design.

To minimize the harmful interaction of drivers and electrical components, all electronics are housed outside in a solid, well-isolated Amp Pack, which can be easily separated from the enclosure for soffit-mounting applications.
