install

## Amphion AV

AV installations range from a wide variety of spaces, acoustic conditions, use purposes and customer expectations. From commercial installations in hospitality to corporate environments and home cinemas, loudspeakers used in AV installation have to perform well when multiple reflective surfaces are present and the listeners are located around the room, or moving. Perfect for these spaces, Amphion's unique acoustic design approach ensures beautiful, room-filling sound for all types of installations.

## For all senses

‘When you first step into a store, visuals create the first impression, but I believe the sounds you hear are just as important. Amphion speakers give clarity and honesty, filling the room without overwhelming the space. We wanted the sound in our space to feel clean, balanced, and intentional—just like our desserts.’

**Ben Kang**  
Founder & CEO of mewame

## Room-wide sweet spot

Using an analogy to light, Amphion speakers fill the room with uniform, diffuse sound. Because of the inevitable reflections in real-life rooms, the off-axis response of the speakers is just as important as the direct, on-axis sound. The low crossover frequency allows all of the drivers in Amphion speakers to behave as coherent point sources, and to maintain the tonal balance in all directions.

## Complete coverage, elaborate experience

Our proprietary waveguide further aligns the directivity patterns and arrival times of the drivers, preventing colouration even from reflected sound and allowing the same engaging and detailed listening experience to the whole room. The clarity and pleasant character of Amphion speakers is maintained even at lower listening levels due to the combination of advanced acoustic design and electrically simple implementation.

## Decorate with sound

Blending perfect sound with immaculate aesthetics does not always mean, that speakers need to be hidden. The well proportioned, timeless lines of Amphion speakers complement architectural and interior design

and blend into any space with ease, enhancing the feel of a space with engaging sound. Further visual integration is possible with coloured grids via the RAL colour matching system.

## Commercial solutions

For commercial installations in hospitality to corporate environments, loudspeakers used in AV installation have to perform well when multiple reflective surfaces are present and the listeners are located around the room, or moving.

The clarity and pleasant character of Amphion speakers is maintained even at low listening levels due to the combination of advanced acoustic design and electrically simple implementation.

## Fulfilling highest demands

‘Sony Music Entertainment Finland’s new office is a modern, industrial-inspired workspace designed with a variety of rooms in different shapes and sizes. Each space places high demands on loudspeaker clarity on varying sound pressure levels. Amphon’s products have not only met, but consistently exceeded our expectations across all these environments.’

Olli Halonen  
Senior A&R Manager  
Sony Music Entertainment Finland Oy

## Wall mounts

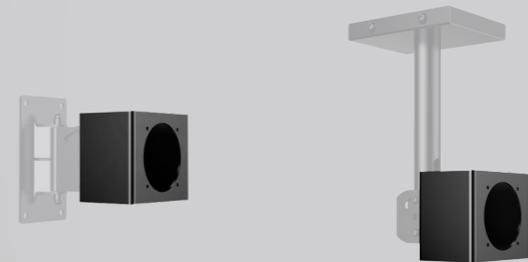

The brackets attach easily and securely to the integrated threaded inserts on the back of the speakers, letting you deliver the familiar Amphion sound without using additional floor or shelf space. Compatible with Argon1, Argon0, and Helium510 speakers.

## Adaptor

Mount other Amphon bookshelf speakers or studio monitors to walls or ceilings using our custom adaptor for König & Meyer hardware. The heavy-duty, zero-flex steel adaptor installs easily onto the threaded inserts of the speaker's terminal panel, giving you true freedom of positioning. The versatile mounting options allow everything between a room-filling, sonic background to a full immersive studio with the pin-point accurate imaging and clarity Amphon monitors are known for.

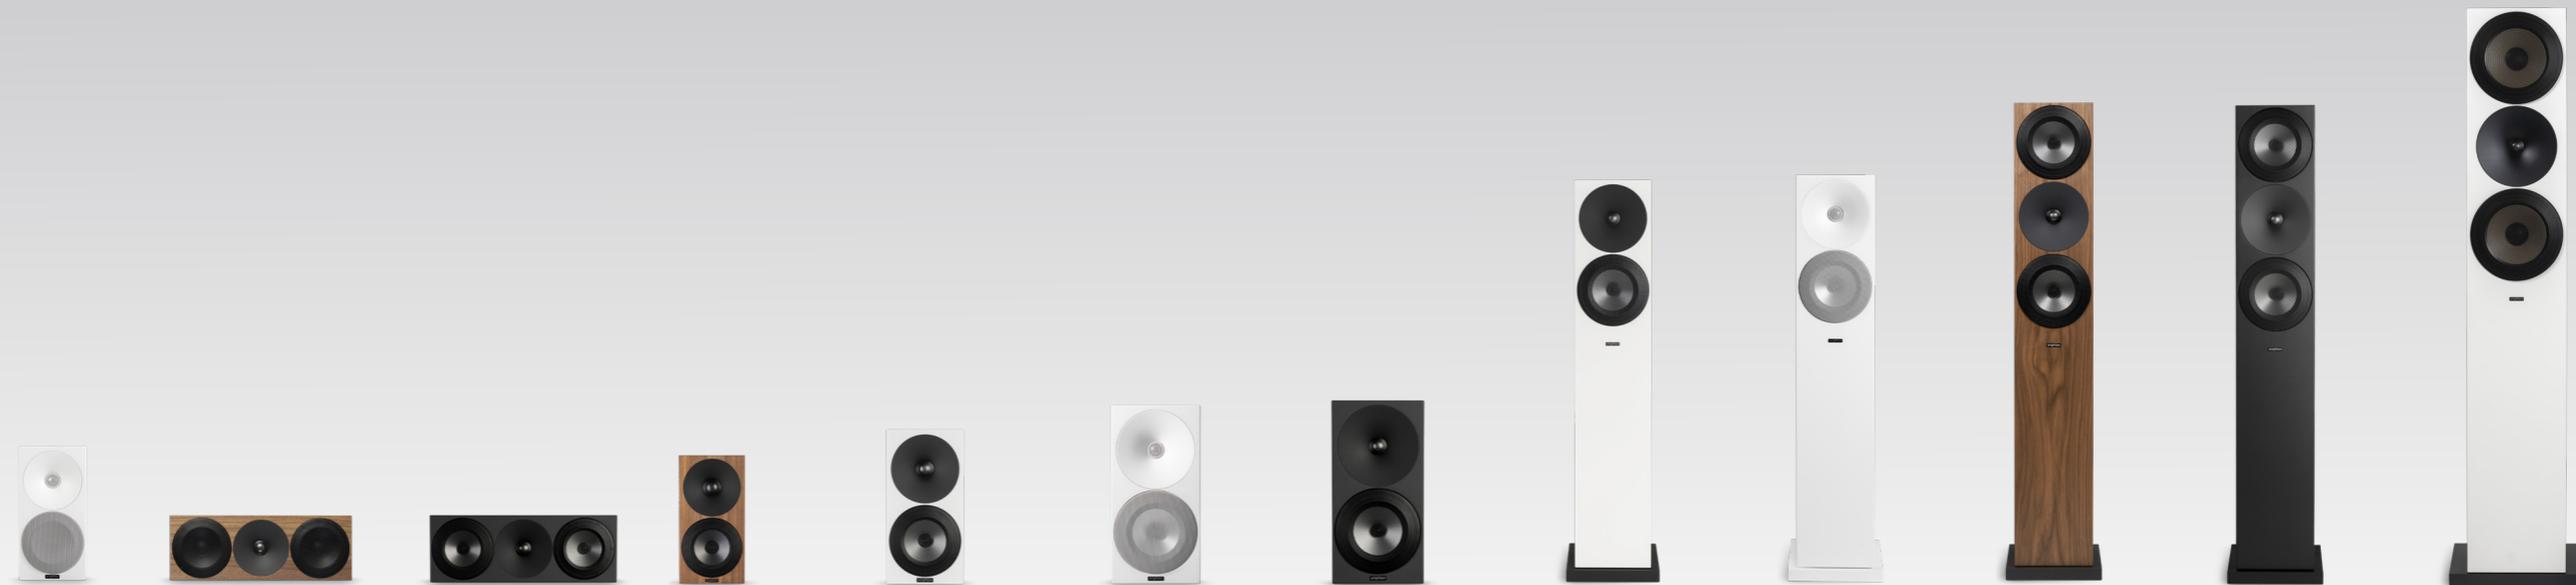

## Endurance through quality

Longevity and sustainability are deeply ingrained in the Finnish culture. We design and build our loudspeakers surrounded by beauty of nature, which shapes how we view the world and life. The synergy of expertise, craftsmanship and high-quality materials lead to long-lasting, durable products. To ensure Amphion speakers last year after year, our speakers are easy to maintain using our original spare parts.
